Underground Magnetics

[www.undergroundmagnetics.com](http://www.undergroundmagnetics.com)

Your Echo Cell rechargeable lithium batteries are charged and ready to use. Insert one lithium battery positive side down into the Echo Cell cartridge and screw the end cap on. Insert into your Echo transmitter positive side down. The Echo Cell should provide power for approximately 20 hours of use. These lithium batteries are specially designed with a protective circuit that will allow the operation of the battery until completely dead without harming the battery. It is recommended however that once you have reached 15 hours of use that you consider charging. Only use the provided UM charger when recharging your Echo Cell batteries.

**Your Echo Cell rechargeable lithium batteries are fully charged and ready for use. Always use the supplied Echo Cell charger when recharging your lithium batteries.**

Place one lithium battery into the Echo Cell Cartridge positive side down.

Screw the negative cap onto the Echo Cell Cartridge.

Install the Echo Cell Cartridge into the Echo transmitter positive side down.

Install the end cap on the Echo transmitter.
